## **The Continuity Bed**

# Why the Continuity Bed?

**Be proactive about aging, and aging in place. Aging in place is important to adult children, residents, staff, and operators alike. The path to successfully aging in place includes attention to nutrition and fitness level, but also to sleep and fall prevention.**

**The Continuity Bed contributes in important ways:**

- 1. Features include articulating foot and head sections, massage, under mount lighting, and a retracting bed frame. These features address such important matters as repositioning and fall prevention.**
- 2. The Continuity Bed is not a skilled healthcare bed but a bridge between an ordinary mattress box spring type bed and a skilled nursing bed.**
- 3. With consideration to its appearance, there are many style options, each graceful and inviting. COM programs and other customization are not only possible but encouraged.**

**With all the features of the Continuity Bed aging in place is made easier and safer. Remember aging in place is a common goal of residents, their adult children and operators alike.**

# Features

Mullery Bed with space saver rails

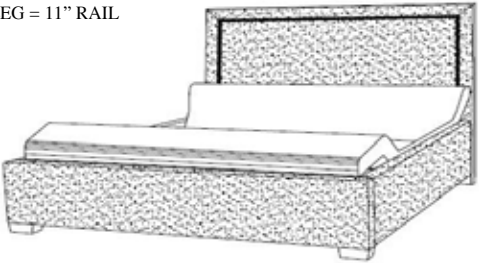

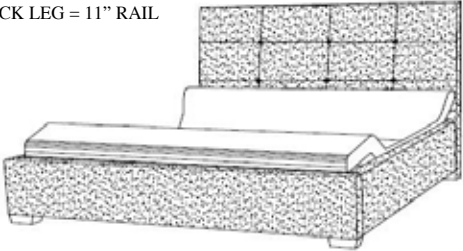

## Features include:

- Articulating foot and head sections
- Massage
- Under mount lighting
- Storage pocket for remote
- A retracting bed frame
- COM programs and other customization are not only possible but encouraged

These features address such important matters as repositioning and fall prevention, and sleep apnea. In the [Continuity Bed](#) you will find many of the features of a skilled nursing bed – while not at all seeming to be one. Use of the [Continuity Bed](#) will allow the residents to safely age in place and greatly reduces the need for temporary rental beds.
